

## Wavy Whale

By J.B. Boyles

### What you need:

- paper plates
- pencil
- crayons or markers
- scissors
- glue
- tape

### How to make it:

1. On the front of a paper plate, draw, color, and cut out a whale and water spout, as shown.
2. Make a fin from the scraps. Glue it on.
3. Place the whale on the back of another plate, lining them up at the bottom. Trace around the tail fin, and cut out a section above and below it as shown, making another tail fin. Color the second tail fin, water, and sky.
4. Glue together the center parts of the two plates. When the glue dries, bend back the bottom edges, and stand the plates up. If necessary, tape a scrap on the back below the whale's tail for balance.
