

Easy-Grip Car

By Garnett C. Kooker

What you need:

- scissors
- hard-plastic handle
- poster board
- glue
- paper clips
- pencil
- small cup
- hole punch
- metal fastener
- markers or cut paper

How to make it:

1. For the roof of the car, cut off the hard-plastic handle from a package or a plastic bag.
2. For the body of the car, cut out two identical shapes from poster board. Glue them together with the bottom of the handle between them. Hold them in place with paper clips until the glue has dried.
3. For wheels, trace around the bottom of a small cup four times onto poster board. Cut out the circles, then punch a hole in the center of each.
4. Punch two holes in the car body. Place one wheel on each side of each hole, then attach them with a metal fastener (loosely, so that the wheels can spin).
5. Use markers or cut paper to decorate the car.
